Press Release, for immediate release

Bunge Emissions Group to sell 152,585 CERs via the Climex Auction Platform

Climex will facilitate a sales auction for Bunge Emissions Group to sell 152,585 CERs on October 5th, 2011. The CERs are from a 'Landfill Gas to Energy' project in the Philippines, are issued and available for immediate delivery. The auction will be single round, open order book, ascending clock and settled directly with Bunge Emissions Group.

Bunge Emissions Group is a division of Bunge Limited. Bunge Limited is a leading agribusiness and food company with integrated operations that circle the globe, stretching from the farm to the retail shelf.

Bunge Emissions Group has been engaged in mitigating carbon emissions for several years through investments in Clean Development Mechanism (CDM) projects and participation in European cap and trade markets.

The project, with UNFCCC id-number 1258, is the 'Quezon City Controlled Disposal Facility Biogas Emission Reduction Project'. The project was developed primarily to address the environment, health and safety concerns of the local government of Quezon City for its constituents. The project has demonstrated environmental, social and economic benefits to the area.

To obtain detailed information about the project and auction process market participants can contact the Climex Client Service Desk via CSDesk@climex.com or call +31 20 305 6200. Parties interested to participate in the auction should contact Climex for further information.

Climex: "After our re-organization earlier this year we have hosted several emissions and energy auctions, all with good results, for both governments and corporate institutions. CERs are commoditized and traded on exchanges, but we provide both the seller and the potential buyers an opportunity to evaluate the project specific information prior to the transaction. In this way all aspects of the

project can be specifically valued and allow(s) the buyer(s) to optimize their CDM portfolios”, says Jeroen van de Kletersteeg, Managing Director of Climex.
